

I N M C

International Network against Mind Control

Stockholm October 9, 1992

Prime Minister
John Major
British Government
London SW1A 0AA
England

Dear Sir,

Our international network of researchers has for several years been engaged in investigations into mind control and its widespread utilization around the world and we have become aware of several victims in Great Britain; reports received from exploited individuals refer to mental hospitals, police authorities and prisons as among the state institutions involved in the implantation of transmitters, electrodes or radio-transmitting crystals in people. The use of mind control is such a grave encroachment on civil liberty that, if allowed to develop further, it will threaten the freedom and integrity of all. Along with environmental problems, this is one of the most urgent issues to address if we are to ensure a more secure future.

The reason we are addressing this letter to you personally is that a meeting between Mr John Austin-Walker, Member of the Parliament and a victim of mind control, impressed on him the importance of pursuing investigations into the matter so much that he addressed a letter to you himself in August this year. Later writing to the injured party, a Mr. N'Tumba, he said: "Following your most recent visit to see me, I have written to the Prime

Minister on your behalf. As you know, there is very little accountability of security services to the House of Commons and Members of Parliament have almost no power in relation to the activities of M15. As soon as I receive a response from the Prime Minister, I will be in touch with you again."

Just what happened to Mr. N'Tumba, he describes himself in a letter to us: "Concerning the brain transmitter in my head, it has been performing without my knowledge or consent... What's very outrageous is that I am sharing all my vision, thoughts, images, hearings...etc with people around me as the security services are engaging in a large scale propaganda drive to smear my character, background, behaviour, emotions and motives... I have no privacy at all... I am not a spy, I am not a criminal, I am not a terrorist. Being an innocent victim of M15... my persecution started in June 1988". What is more, there is no reason to suspect the validity of what he writes; we are overburdened with letters such as this one from the USA, Denmark, Sweden, Germany, New Zealand inter alia and our investigations in Sweden reveal a terrifying reality where the mental health services, police authorities and hospitals implant radio-transmitting devices in people's heads and brains. This reality is exposed by a vast amount of X-ray material to be a chilling and gloomy vision of the future, stage-managed for decades by the security forces in collaboration with medical and psychiatric institutions who together have created a secret power which transcends law and order and which is beyond intrusive public control.

Brain-computer radio communication has long been considered impossible by the majority of people and has consequently been relegated to science-fiction, but the fact is that the technology had been developed into reality by at least the 1960s during which time the initial experiments were being per-

formed on unwitting subjects. The system has at different times been called Intra Cerebral Mind Control, ESB, Electronic Stimulation of Brain, Biological Radiocommunication or Bio-medical telemetry and in both the eastern and western worlds is the prevailing system of mind control, creating unlimited possibilities to influence and change an individual's behaviour patterns and personality. By means of two-way radio communication, called telemetry or remote-control, an electromagnetic wave can be sent on a return trip to a receiver/transmitter located under the skull or in the brain; this signal records the activity of the brain and returns it to a computer for analysis from which all aspects of the subjects life can be exposed. Radio transmitting crystals which when injected into the bloodstream fasten themselves to the brain have been under development for decades. They work on the same principles as a normal transmitter, use the same technology and contain the same possibilities.

To analyse an EEG in a computer instead of a conventional printer provides an entirely fresh perspective on the conclusions which can be drawn and gives a whole new perspective on what can be concluded. Cognitive manifestations and activity such as thoughts and visual impressions or emotions, behaviour and psychological reactions can continually be registered, making it possible for secret police authorities, medical scientists and the state to observe an individual in a deeper and more comprehensive way than the individual could possibly do him or herself. Through analysis and manipulation by the computer, it is even possible for changes in an individual's physical mental status to be effected. The potential of intracerebral remote control is limited only by the imagination of the investigator, especially when it is remembered that, since these frequencies travel at the speed of light, the system of control is not constrained by matters of range.

Concerning the case of Mr. N'Tumba, it is obvious that there is simply no justification for implanting the mind transmitter, whether for police surveillance or psychiatric research. We feel, furthermore, that this is yet another example of human rights violation as defined under the CSCE 1980-83 Madrid conference and as embodied in the Final Act of Helsinki. We also wish to note that such activities are also in contravention of several agreements, endorsed by Great Britain, within the United Nations system, including in particular the International Bill of Human Rights and Articles 3, 4, 5 and 12 of the Universal Declaration of Human Rights.

The use of mind control techniques has in fact fostered a new relationship between state and citizen, in which many human rights, as prescribed in the United Nations's Universal Declaration of Human Rights, are violated; in particular we turn to Article 3 which states that all people have the right to life, liberty and integrity. This is clearly violated by such experimentation in mind control, and the very subjection of an individual's brain to medical research, behaviour modification experiments and mind control is in contravention of Article 4 which decrees that no one shall be held in slavery or servitude. Explicitly violated is Article 5 which states that "No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment. Nor shall anyone without their approval be utilised for medical or scientific experiments". Finally, since such mind control techniques transmit an individual's privacy to the state, Article 12, which defends the right of privacy against arbitrary interference, also ceases to be valid.

Recently we received some X-ray pictures of Mr. N'Tumba and our medical experts in Stockholm have examined those of his skull and can confirm that a transmitter has been implanted in his left nostril. Furthermore, it can be seen that electrodes placed in the occipital lobe are blocking the bloodflow behind their delimitation where the oxygen depletion is caused and this is seen as well in his frontal brain just above the implanted transmitter. Among the changes caused by the frequencies affecting his brain the reduced oxygen levels have induced an alteration of neurological functions, impaired cognitive abilities including that of memory. Moreover he has obviously been anaesthetised without his knowledge so that this implantation could be performed.

By the 1970's, Samuel Chavkin, the American newspaper publisher whose papers had a medical inclination and who was highly aware of social trends, was writing, "telemetry for the surveillance of every citizen is on the drawing board...mind control techniques could become standard equipment for governments, penal and police institutions in the near future". Further aspects of this technology have come to light from other researchers such as J.M. Delgado who writes in his book "Physical Control of the Mind": "By electrical stimulation of specific cerebral structures, movements can be induced by radio command, hostility may appear or disappear, social hierarchy can be modified, sexual behaviour may be changed, and memory, emotions and the thinking process may be influenced by mind control... Transmitters have no batteries, are activated by radio and can be used for life". The popular scientist Carl Sagan wrote in "The Dragons of Eden" that he saw the possibility to implant brain electrodes as a strong argument against state control of the health services stating that, "people who would allow their government to use electrodes have already lost the battle...when it comes to technological nightmares it is imperative that we see the possibilities so that the people can understand them and prevent their abuse by institutions, bureaucrats and governments".

Naturally there are many possible ways to evaluate the issue but it is not difficult to see direct implications for individual freedoms: those which give a right for a person to live his or her own life, to choose his or her thoughts and opinions, decide his or her own destiny. The question is whether our right to these should remain intact or if our neurological functions should be recorded and submitted to the control of the state with its predetermined political intentions and psychiatric computer programmes which transform us into robots. During mind control, people are forced to become the victims of

researchers' experiments and the life that was always the individual's is encroached upon by medical science and the state. This technique can recreate people, change their behaviour and values, as well as their characters, opportunities and fates. It is the inner and most important freedom which is threatened, that which during the history of mankind, has been obviously and naturally valued more highly than suffrage and the temporary political system under which we live.

We wanted to provide you with this brief summary of the territory which Mr. John Austin-Walker discussed with you, in order to hear the opinions and evaluations of the Prime Minister of one of the world's most influential countries concerning this most pressing of humanistic issues. We are at a crossroads where the choices relating to human freedoms are either confinement behind an electronic barbed-wire fence or growth like an exquisite blossom flourishing out of its own biological depths.

We would greatly appreciate a statement regarding your views concerning this issue, and we urgently press you for all possible assistance which you can give to Mr. N'Tumba.

Yours faithfully

Lennart Lindqvist
International Secretary

Encl.

X-ray picture

This is the referred X-ray picture of Mr. N'Tumba's occipital lobe and electrodes can clearly be seen blocking the bloodflow behind their delimitation.

The X-ray examination was performed at Brook Hospital Main, September 16, 1992.

HOUSE OF COMMONS
LONDON SW1A 0AA

Mr K N'Tumba

20 August 1992

Dear Mr N'Tumba,

Following your most recent visit to see me, I have written to the Prime Minister on your behalf.

As you will know, there is very little accountability of security services to the House of Commons and Members of Parliament have almost no power in relation to the activities of MI5.

As soon as I receive a response from the Prime Minister, I will be in touch with you again.

Yours sincerely,

A handwritten signature in cursive script that reads "John Austin-Walker".

PP John Austin-Walker MP

We wish you have received
our mail and enclosed
material of October 2nd.

Wish you will publish
this enclosed letter to the
Prime Minister John Major.

Please, reply when you re-
ceived this mail.

Your Sincerely
Robert Naeslund
